

RES – Q - JACK CARGO SYSTEM by PLASTIX PLUS

This is our set of cargo boxes designed for the RES-Q-JACK rescue strut system. With the many different components that are available with the system, it only makes sense to keep them organized to make emergency deployment easy and effective.

Each box carries different parts of the system. The longer boxes can be designed to carry as many of the jacks as you like. One jack system (**jack and extension**) per box is the recommended capacity. The smaller boxes are designed to carry your chains, hooks or any other accessories that come with the system.

Each individual box is custom built to fit your tools and/or your compartment. We can build any style box you'd like. You also have the option of a custom built floor to help keep your boxes organized and in place and the plastic against plastic makes for a very easy sliding surface.

A third option is to go with a completely customized tray insert that keeps all your RES-Q-JACK components ready at arms reach for deployment.
